

intended prompt

framing (Chinese):

帮我解决这个问题，请实现 Solution 类的方法：

problem body (English):

roads go $i \rightarrow i+1 \rightarrow i+2 \dots$

encoding bug

UTF-8 bytes
read as CP437

prompt as sent to the model

framing (garbled):

σγ «μêæΦ^ºúσå|Φγ ÖΣγ ¬θù«θóÿη∂î... Solution ...

problem body (symbols garbled):

roads go $i \text{ ΓåÆ } i+1 \text{ ΓåÆ } i+2 \dots$

74% of multilingual framing · 9 problems' symbols ($\rightarrow$, $\leq$) in every condition

losslessly recoverable: `'ΓåÆ'.encode('cp437').decode('utf-8') = '→'` (same text, wrong code page)

The model ignores the noise and solves from the intact English body — an input-side artifact that does NOT bite.

100% still produce code · 0 refusals / safety responses · headline unchanged: naive artifact $p = 6.4 \times 10^{-7}$ (all 167) $\rightarrow 6.7 \times 10^{-8}$ (excl. 9 corrupted), robust null both
